IMechE Hong Kong Branch
Activity Sub-Committee – Technical Visit Group

TECHNICAL VISIT to the High Angle Rescuing Operation

The High Angle Rescue Team (HART) of Hong Kong Fire Services Department was established in 2011. HART is the only accredited team in Asia that has mastered the advanced skill of using industrial ropes for performing rescue operations.

The main duty of the team is to carry out rescue operations at high angle locations such as cable cars, tower cranes, bridge towers, scaffoldings at construction sites and suspended working platforms of high rise buildings.

By visiting the rescuing operation of Tower Crane related accident, our members can have a better understanding about the operation of the high angle rescuing. Also, our members in the construction related industry can then enhance their knowledge and improve their preparation in order to facilitate the rescue operation in the construction site.

Date: August 6, 2016.
Time: 9:00am – 12:30pm

Free of charge for IMechE and HKICW Members
Number of participants is limited to 30.
